Education

Georgia Institute of Technology
Master of Science, Computer Science (Artificial Intelligence Specialization)

Dec 2025
GPA: 4.0

The College of New Jersey
Bachelor of Science, Computer Science

May 2021

Employment

Lockheed Martin
Senior AI Engineer

Jan 2025 - Present

Key Technologies: Python, RAG, LLMs, LangChain, Google ADK, OpenShift (Kubernetes), TypeScript, Next.js, Elasticsearch

- Serving as a lead engineer on an internal consulting team of AI engineers, working 0 - 1 projects across the enterprise.
- Managing a cross-functional effort to leverage agentic AI for code security scanning to secure products across the corporation.
- Championed a culture of responsible AI usage to help developers execute customer projects at a higher velocity.
- Built agentic code intelligence tools using knowledge graphs and LLMs to analyze, document, and modernize mission-critical legacy systems spanning 100K+ lines of code.
- Leading development of a deep research platform for asset sustainment, combining RAG and Text2SQL workflows to improve fleet sustainment decision-making with a projected cost savings of \$185 million over four years.
- Led agentic automation for contract proposal workflows, generating key artifacts from source materials and reducing time to first draft from hours to minutes, with an estimated \$44M in annual savings.
- Built a full-stack agentic research application with product, design, and engineering stakeholders, automating user interviews and reducing UI research overhead by 90%.

Civil Rights Litigation Clearinghouse
AI Engineer

Jan 2026 - Present

Key Technologies: Python, Docker, LLMs, Mistral, Anthropic, Django

- Developing an AI platform for civil rights case documentation, helping law students review court records, generate structured summaries, and reduce manual entry.

Lockheed Martin
Senior Machine Learning Engineer

March 2024 - Jan 2025

Key Technologies: Python, AWS, ChromaDB, LangChain, PyTorch, Docker

- Acted as interim deputy lead for a multi-disciplinary R&D initiative, driving technical execution across the program.
- Developed a wildfire detection capability that replaced heuristic alerting logic with deep learning, reducing false positives by 50% for disaster response use cases.
- Partnered with software engineers to productionize AWS-hosted ML services, delivering AI insights for disaster response.

Lockheed Martin
Machine Learning Engineer

June 2022 - March 2024

Key Technologies: Python, KServe, Transformers, MLOps, Kubeflow, PyTorch, Docker, Angular

- Built and deployed an NLP classification capability for sensitive document handling, helping subject matter experts route regulated data types and maintain international compliance requirements.
- Developed a set of reusable AI software libraries for resource-constrained environments, enabling 100+ products to adopt AI.

Lockheed Martin
Associate Machine Learning Engineer

June 2021 - June 2022

Key Technologies: Python, Go, gRPC, PostgreSQL, Docker

- Built an edge-deployed, event-driven microservices platform, cutting wildfire mission data processing time by 80%.

Skills

Languages: Python, TypeScript, Go

AI/ML: Google ADK, RAG, PyTorch, Transformers, LangChain

Systems: Docker, AWS, PostgreSQL, gRPC, FastAPI, Elasticsearch, Next.js, TanStack, React
